

SOFIA LOVÉN

Frontend developer & Nurse

As both a frontend developer and a registered nurse, I am accustomed to working in teams, and I understand that learning is a continuous process. Therefore, I am very curious about new ways to write code, and I am not afraid to try new frameworks or programming languages. I also know the importance of taking responsibility of your work.

I am a very positive and caring coworker that brings joy to the work.

Frontend developer

Nackademin Higher Vocational Education

2022 - 2024

Stockholm

Nurs Education

Sophiahemmet University

2014 - 2017

Stockholm

Language

Swedish

English

German

Experience

Frontend developer - intern

Doctrin AB

Nov 2023 - Maj 2024

I started my internship at Doctrin in November. At Doctrin I've had the opportunity to develop my skills in their platform. It targets healthcare professionals and patients and therefore has high demands for accessibility. I've been able to work on my own tasks in a cross-functional team. We've been working according to DevOps principles and agile methodologies. Doctrin has been very pleased with my work and is happy to provide a reference.

Registered Nurse

Capio St Görans sjukhus

Jun 2017 - Nov 2023

I have worked as a nurse in the hospital's cardiology departments and central operation. Thanks to this, I am accustomed to working in teams with various professions. I am accustomed to meeting people in different situations and creating a safe encounter. As a nurse, I coordinated and planned a lot of work. Prioritizing and planning various tasks were a significant part of my job.
